**React Native apps
make all the money**

We did a study

RevenueCat analyzed over **75,000** subscription apps, making over **\$10B** in revenue, built with:

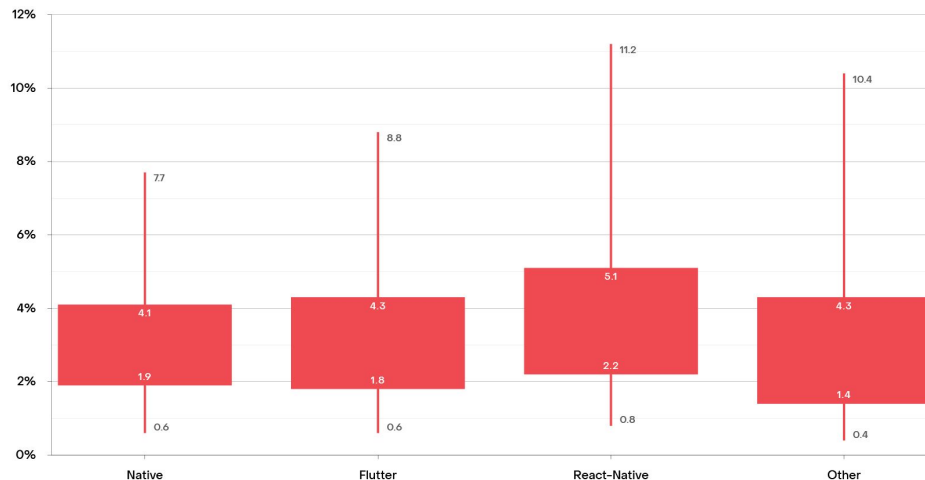

- Native (Swift, Android, etc.)
- React Native
- Flutter
- Other (Unity, Cordova, etc.)

RevenueCat State of Subscription Apps 2025

**Turns out,
React Native wins in
(almost) everything**

Turns out React Native wins in (almost) everything

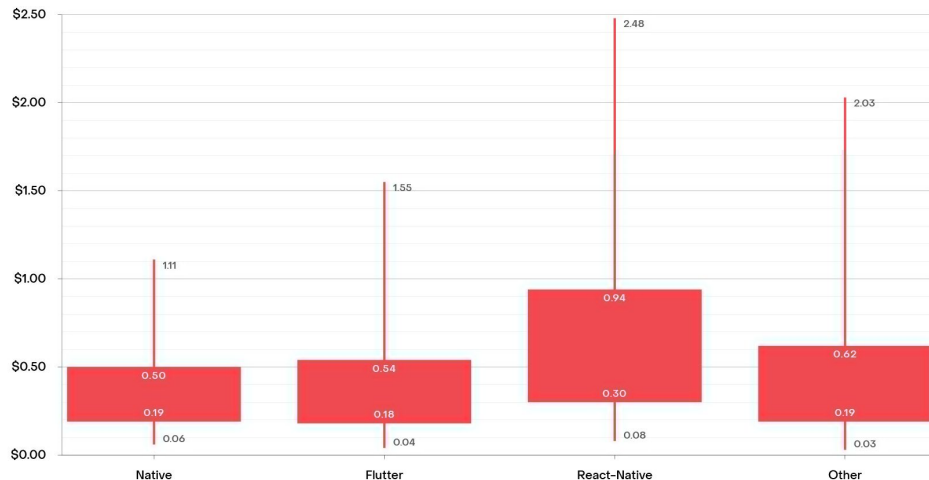

- 🏆 Download to paid

RevenueCat State of Subscription Apps 2025

Turns out React Native wins in (almost) everything

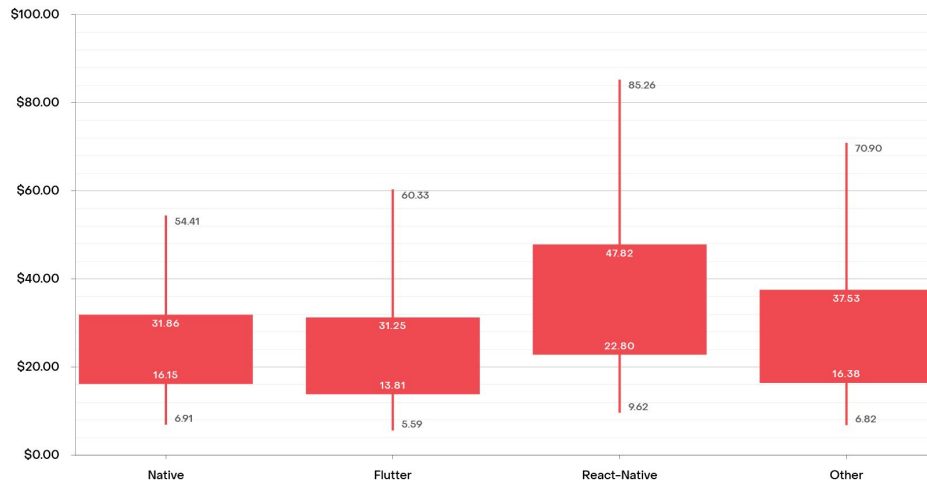

- 🏆 Download to paid
- 🏆 Revenue per install

RevenueCat State of Subscription Apps 2025

Turns out React Native wins in (almost) everything

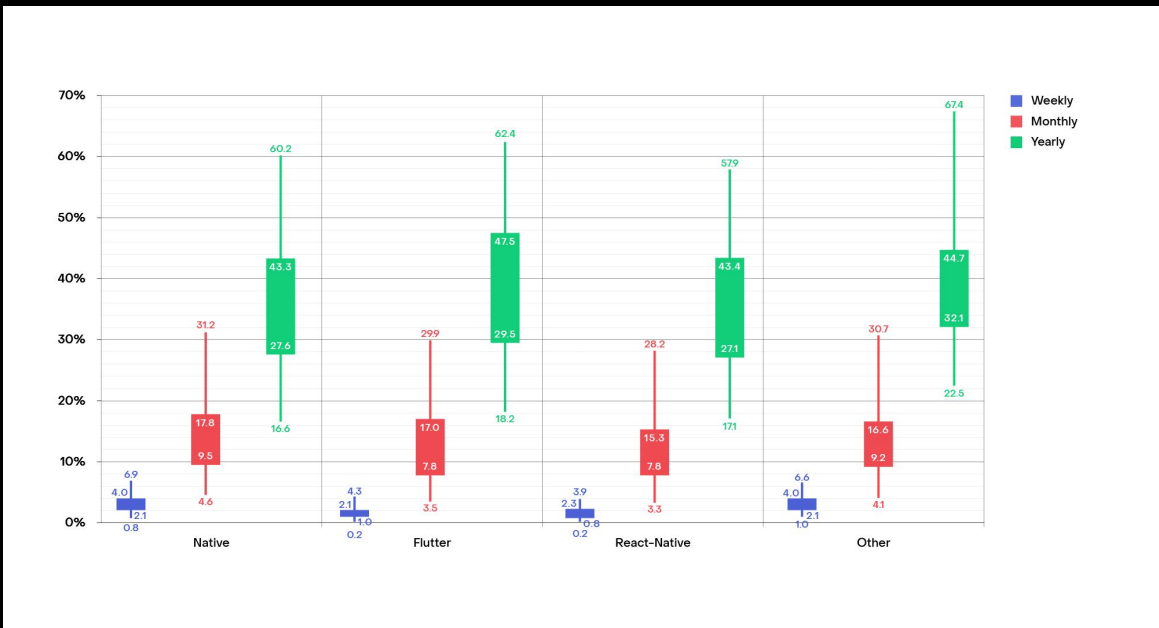

- 🏆 Download to paid
- 🏆 Revenue per install
- 🏆 LTV per customer

RevenueCat State of Subscription Apps 2025

Turns out React Native wins in (almost) everything

- 🏆 Download to paid
- 🏆 Revenue per install
- 🏆 LTV per customer
- 😞 Year 1 retention

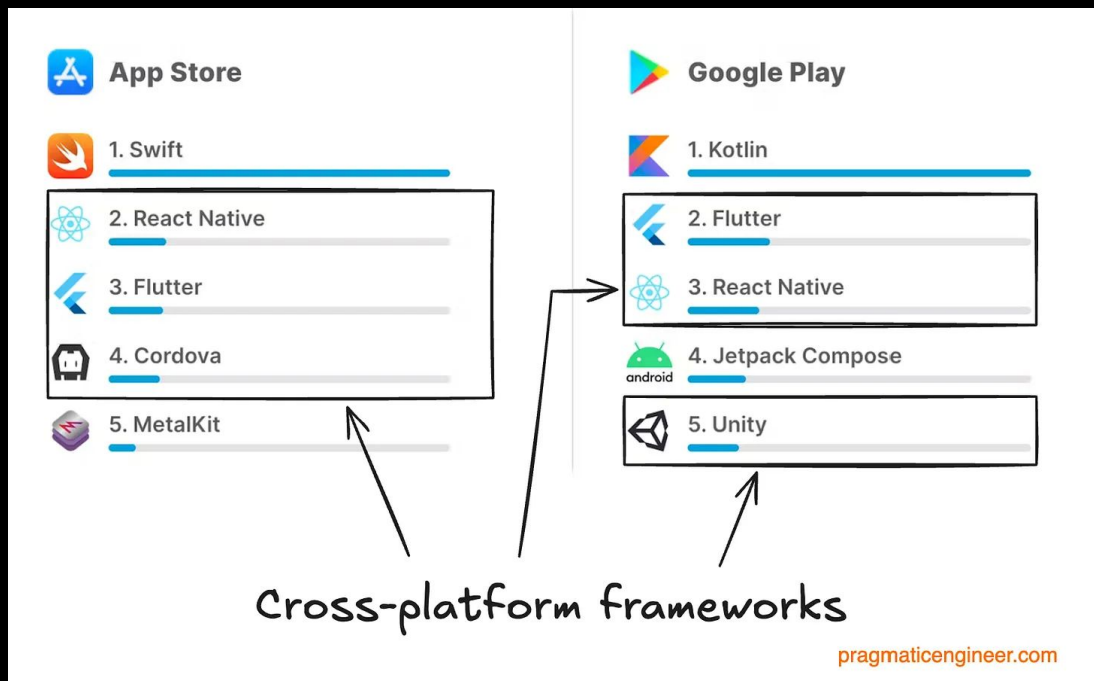

RevenueCat State of Subscription Apps 2025

But why?

Why do React Native apps make money?

- Companies are choosing proven technologies...
- ... for which it is easy to hire great developers
- i.e. React Native

Cross-platform mobile development
- The Pragmatic Engineer

React Native: toolset for speed

Great apps are about delivering value fast, in order to learn fast

- Cross-platform reach: iOS, Android, Web, whatever
- “Native feel” is really really important
- Faster development and time-to-market
- Single code-base
 - Feature parity
 - Monetization parity

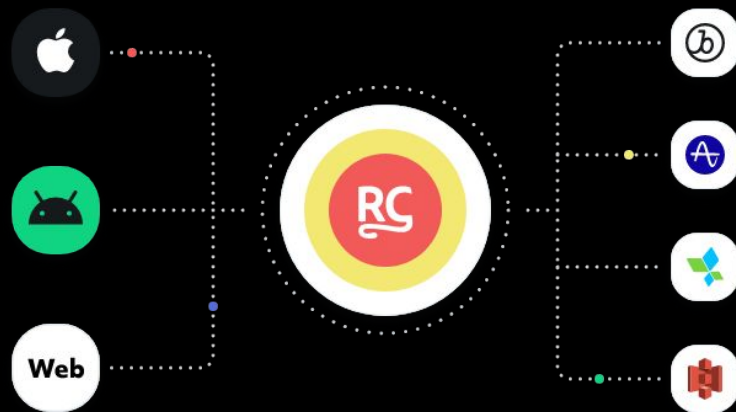

How do I make
money with my app?

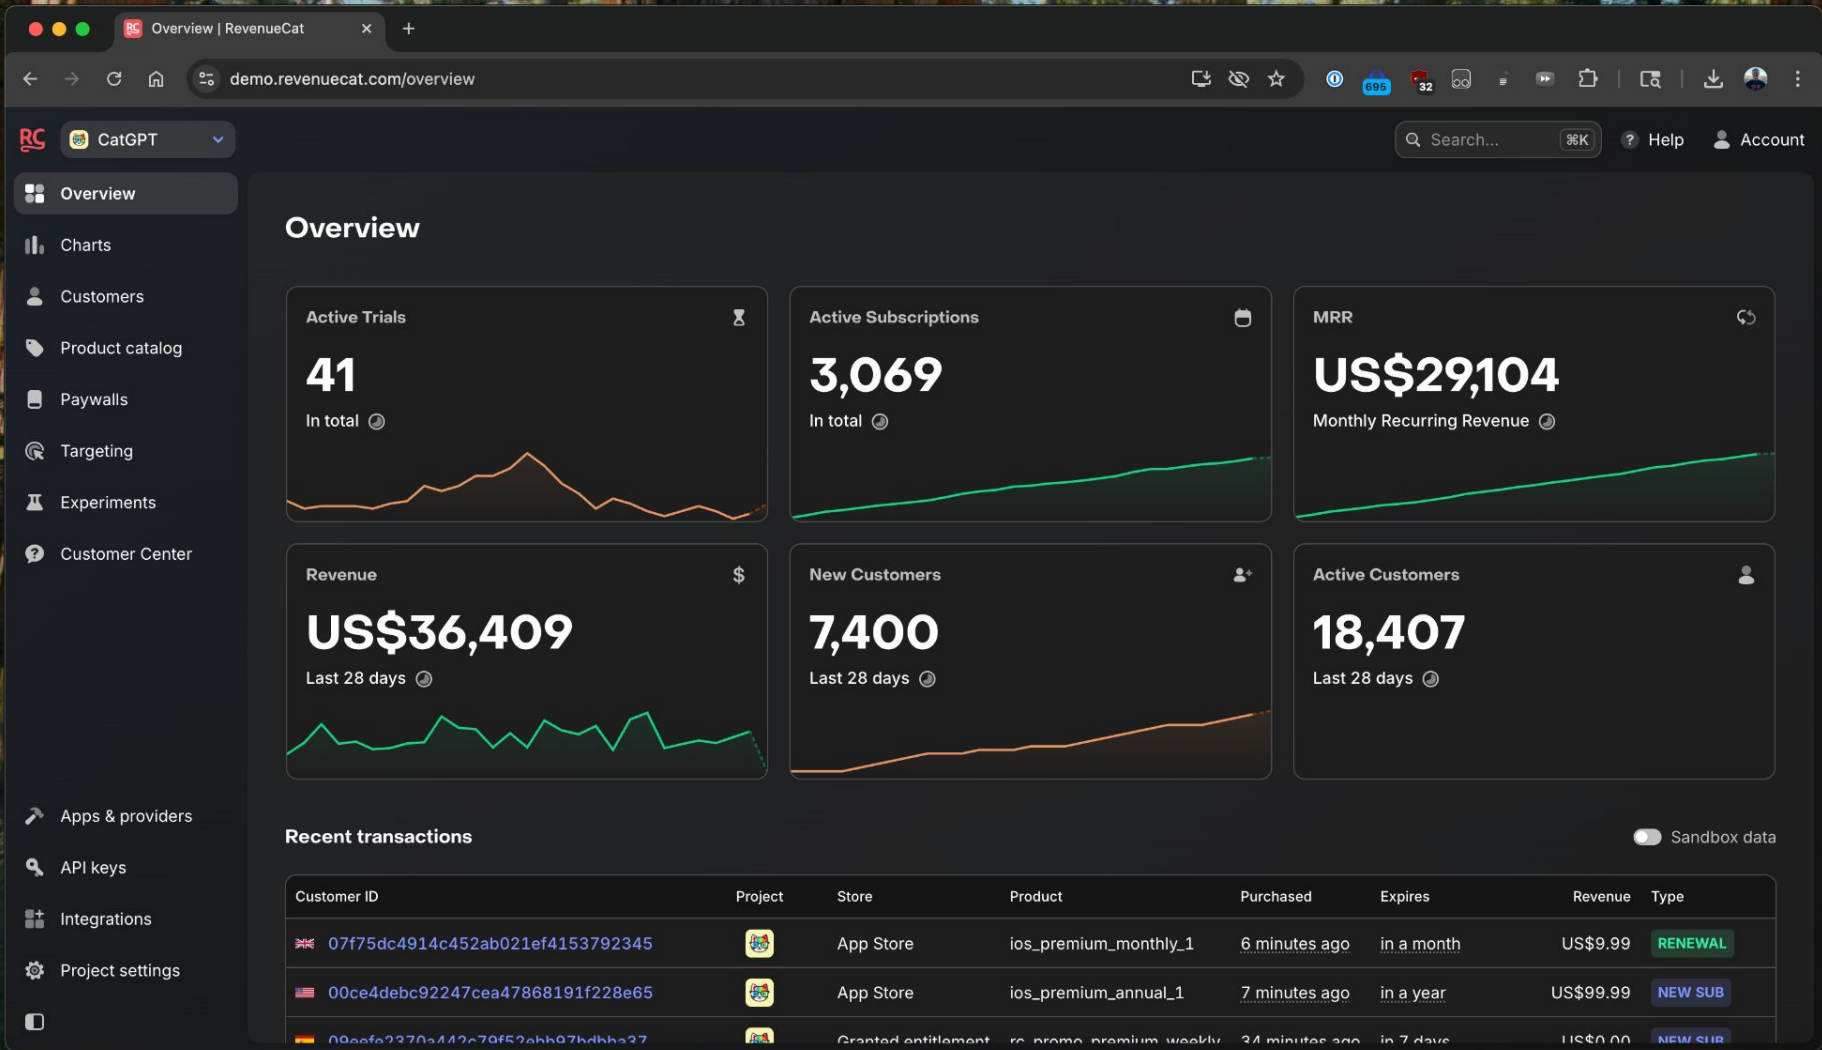

Why RevenueCat

Subscriptions, in-app purchases, web payments

All in one place

- Your subscription backend-in-a-box
- SDK for all major platforms and languages
- Handles store quirks & validation
- Monetize, analyze, target, experiment

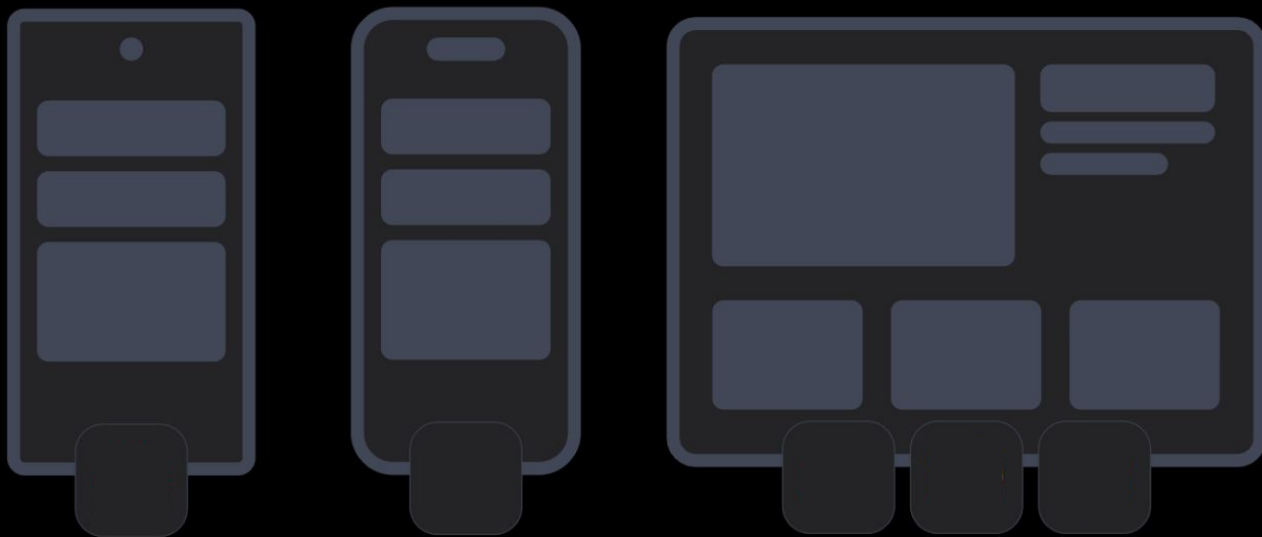

Make money with Web, iOS, Android

- With **Expo** you can build for *three platforms with a single code base*

Make money with Web, iOS, Android

- With **Expo** you can build for *three platforms with a single code base*
- With **RevenueCat** you can *monetize three platforms with a single code base*

Make money with Web, iOS, Android

- With **Expo** you can build for *three platforms with a single code base*
- With **RevenueCat** you can *monetize three platforms with a single code base*

```
$ npx expo install react-native-purchases
```

In code

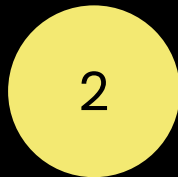

Monetize with react-native-purchases

Annoyingly simple setup

Initialize SDK

- Platform specific API keys

Purchase subscription

- With paywall
- With a `purchasePackage()`

Check entitlement

- What user is eligible to access

Step 1: initialize SDK

```
import { Platform, useEffect } from 'react-native';
import Purchases from 'react-native-purchases';

export default function App() {

  useEffect(() => {
    Purchases.setLogLevel(Purchases.LOG_LEVEL.DEBUG);

    if (Platform.OS === 'ios') {
      Purchases.configure({ apiKey: <public_apple_api_key> });
    } else if (Platform.OS === 'android') {
      Purchases.configure({ apiKey: <public_google_api_key> });
    } else if (Platform.OS === 'web') {
      Purchases.configure({ apiKey: <public_web_api_key> });
    }

  }, []);
}
```

Step 2: Make a purchase

```
import RevenueCatUI, { PAYWALL_RESULT } from "react-native-purchases-ui";  
  
// By purchasing package call  
  
const { customerInfo } = await Purchases.purchasePackage(package);  
  
// or through a paywall  
  
const paywallResult: PAYWALL_RESULT = await RevenueCatUI.presentPaywall();
```

Step 3: Check entitlements

```
try {  
  const customerInfo = await Purchases.getCustomerInfo();  
  if(typeof customerInfo.entitlements.active['pro_access'] !== "undefined") {  
    // Grant user "pro" access  
  }  
} catch (e) {  
  // Error fetching purchaser info  
}
```

That's it
