

React Conf talk

Why React Native makes all the money

1. Cold Open: Bold Claim (0:00–0:45)

- "React Native apps print money."
- Let that hang. Then immediately: "Not metaphorically — literally."
- Tease the structure: I'll show you the hard data, explain why, and then show how easy it is to cash in using RevenueCat.

2. Proof: The Data Says So (0:45–3:00)

- React Native & Flutter power ~15% of all new apps (Appfigures, 2024)
- Combined they generated ~\$8B net revenue last year — 9% of all app revenue
- But React Native apps earn more per app than Flutter:
- React Native: \$287M in last 30 days vs Flutter's \$283M
- 790 RN apps earning \$10K–\$100K/mo, 255 earning \$100K–\$1M/mo, 173 earning \$1M+
- R

3. Why React Native Wins Economically (3:00–6:00)

- Why
- One codebase → Web + iOS + Android
- Faster to launch → Faster to monetize
- React devs everywhere
- Proven by giants

Key pull-quote: TK

4. The Punchline: You're Leaving Money on the Table if You Aren't Monetizing (6:00–7:30)

Call out the audience:

- Seeing as how easy that is, it's no wonder RN monetizes better.
- "Adding monetization should not take months, it should take minutes."

5. Live Demo: Add RevenueCat to a React Native App (7:30–9:30)

Walk through the mental model, not full setup:

1. Install SDK
2. Present paywall

3. Check entitlement
4. Navigate to dashboard — boom, real money flowing

TK: quote

6. Closing (9:30–10:00)

- Recap of shorts
